Project Title: Event Management System

1. Introduction

Purpose

The Event Management System helps manage event planning, bookings, participants, and schedules efficiently.

Scope

The system allows users to create events, manage registrations, track attendees, and organize event schedules. Admin manages events, participants, and event details.

Definitions

EMS – Event Management System
UI – User Interface
DBMS – Database Management System

---

2. Overall Description

Product Perspective

A computer-based system connected to a database to manage events, participants, and registrations.

Product Features

- User login
- Event creation and management
- Participant registration
- Event scheduling
- Attendee management
- Admin management

User Classes

Participant/User:
Registers and participates in events.

Admin/Event Organizer:
Creates events, manages registrations, and controls event details.

Operating Environment

Computer system or web application connected to a database.

---

3. System Features

Feature	Description	Priority
User Login	Access the system	High
Event Management	Create and update events	High
Registration System	Allow users to register for events	High
Schedule Management	Manage event schedules	Medium
Attendee Management	Track event participants	Medium
Admin Management	Manage system data and events	High

---

4. External Interface Requirements

User Interface:
Desktop or web-based interface for users and admins.

Hardware Interface:
Computer system and optional printer for reports.

Software Interface:
Database system for storing event and user data.

---

5. Non-Functional Requirements

Performance:
Fast event registration and data retrieval.

Security:
Secure login and data protection.

Reliability:
Accurate event and participant records.

Usability:
Easy-to-use interface for both users and administrators.
